## **New Cable Manager Lifts All Cable Clutter Off The Floor**

We are all faced with the unsightly array of tangled cables littering the floors of our homes and offices.

We snag, yank, and trip over stray cables risking personal injury or equipment damage. We avoid vacuuming under our desks to prevent catching cables in the sweeper. And we pay IT service costs only to find out the problem was simply a cable we unintentionally disconnected with our foot. Cable clutter on the floor is ugly, hazardous and sometimes costly.

“ Why does the entire cable mess have to lay all over the floor?” asked, Robert Bellows one of the founders of the Cable-Safe Company. The answer was clear. There is nowhere else to put them. So Robert and his partner John Mancino set out to create a place for cables to go.

Over 18 months the two invented an entirely new concept in workstation cable management called the Cable-Safe Complete Cable Manager.

It's a complete kit of sturdy snap-together parts that looks like the skeleton of a space station when assembled. It lifts all cable clutter off the floor, organizes cables in neat loops and creates an under-the-desk shelf to stack hubs, power adaptors and other small devices.

The Cable-Safe provides a place for everything. Once installed, nothing, not even the power strip remains on the floor. Finally we can all enjoy clean floors under our desks.

**How Does It Work?** (See animation at <http://www.cable-safe.com>)

The Cable-Safe clamps onto the desk or through the cable grommet hole with the simple push of a lever. Snap a few parts together and in an instant you have a place to hang cables and power strips as well as a shelf to mount hubs or power adaptors.

Cables are then tied into loops and hung in rows on 4 1/2” hooks. Hubs and other devices are secured to the shelf with quick-latch bungee straps. Color and pattern coded labels are provided to mark each cable in 5 places so every cable can be easily identified all the way from source to destination.

In a few minutes, all your cables can be hanging in neat tangle-free loops. Each cable will be easy to access, identify, move or replace. And, your floor, free from clutter, will now be easy to clean.

One kit will organize 12-15 cables. It is easy to install, mounts anywhere and works on computer workstations or home entertainment systems. It can be expanded to organize any number of cables by simply adding more kits.

All Cable –Safe products are made in USA.
